

FLIPKART MOBILE

BRANDS DATASET

POWER BI DASHBOARD

Dataset Description

- The Flipkart Mobile Brands Dataset contains detailed information about smartphones available on the Flipkart e-commerce platform. The dataset is designed to analyze different mobile brands, their selling prices, customer ratings, memory variants, and model availability. It helps in understanding market trends, customer preferences, and the overall performance of smartphone brands in the online retail market.
- The dataset includes multiple brands such as Samsung, Apple, Xiaomi, OPPO, realme, Nokia, Lenovo, ASUS, and others. Important attributes in the dataset include brand name, model name, selling price, memory/storage capacity, and user ratings. Using this dataset, various exploratory data analysis (EDA) techniques and visualizations can be performed to identify top-performing brands, price distribution, customer satisfaction levels, and product availability.
- This dataset is useful for business analysis, market research, and data visualization projects. It enables researchers and analysts to compare smartphone brands and understand how factors like pricing and ratings influence customer buying behavior. Overall, the dataset provides meaningful insights into the competitive smartphone market on Flipkart and supports data-driven decision-making.

CONCLUSION

- The Flipkart Mobile Brand Analysis Dashboard shows that Samsung dominates the market with the highest share of mobile models and overall ratings compared to other brands. Apple also maintains strong customer ratings, indicating high user satisfaction despite having fewer models. Brands like Realme, OPPO, and Xiaomi contribute significantly to the market with competitive product availability.
- The dashboard also highlights that most mobile phones are concentrated in the affordable price range, with a first selling price around 1000. In terms of product availability, brands such as Lenovo and ASUS have higher selling-price counts, while brands like HTC and IQOO show lower market presence.
- Overall, the analysis indicates that customer preference is strongly influenced by brand reputation, product variety, and ratings, with Samsung emerging as the leading brand on the Flipkart platform.
